

GOAL: Student names the fraction shaded in a picture.

BIG IDEA

A fraction shows part of a whole. The top number (numerator) is the part; the bottom (denominator) is the total.

KEY IDEAS

Anatomy of a Fraction

numerator / denominator

The NUMERATOR (top) tells you how many parts you have. The DENOMINATOR (bottom) tells you how many equal parts the whole is split into.

Tip: $3/8 = 3$ parts out of 8 equal parts

Bigger Denominator = Smaller Piece

$$\frac{1}{2} > \frac{1}{4} > \frac{1}{8} > \frac{1}{16}$$

When the numerator is the same, a bigger denominator means smaller pieces — more cuts = smaller slices.

Tip: Would you rather $1/2$ or $1/8$ of a pizza?

Equivalent Fractions

$$\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8}$$

Multiply or divide BOTH top and bottom by the same number to get an equivalent fraction.

Tip: $1/2 \times 2/2 = 2/4$ — same amount, different form

M7
Lesson

GOAL: Student compares two fractions using pictures.

BIG IDEA

To compare fractions, convert them to the same denominator, then compare numerators.

KEY IDEAS

Common Denominator Method

Convert to LCD, then compare numerators

Give both fractions the same denominator, then the bigger numerator wins.

Tip: $2/3$ vs $3/5$: $LCD=15 \rightarrow 10/15$ vs $9/15 \rightarrow 2/3$ wins

Same Numerator Shortcut

Same numerator $\rightarrow$ bigger denominator = **SMALLER** fraction

When numerators match, more cuts = smaller slices.

Tip: $1/5 < 1/3$ because $5 > 3$

Cross Multiplication

a/b vs c/d : compare $a \times d$ with $c \times b$

Multiply diagonally. The fraction with the bigger cross-product is greater.

Tip: $2/3$ vs $3/5$: $2 \times 5 = 10$ vs $3 \times 3 = 9 \rightarrow 2/3$ wins

Compare fractions

Grade 4 · Skill M7 · Lesson — read before Sheet 16

M7
Lesson

GOAL: Student compares two fractions.

BIG IDEA

A fraction shows part of a whole. The top number (numerator) is the part; the bottom (denominator) is the total.

KEY IDEAS
Anatomy of a Fraction
numerator / denominator

The NUMERATOR (top) tells you how many parts you have. The DENOMINATOR (bottom) tells you how many equal parts the whole is split into.

Tip: $3/8 = 3$ parts out of 8 equal parts

Bigger Denominator = Smaller Piece

$$\frac{1}{2} > \frac{1}{4} > \frac{1}{8} > \frac{1}{16}$$

When the numerator is the same, a bigger denominator means smaller pieces — more cuts = smaller slices.

Tip: Would you rather $1/2$ or $1/8$ of a pizza?

Equivalent Fractions

$$\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8}$$

Multiply or divide BOTH top and bottom by the same number to get an equivalent fraction.

Tip: $1/2 \times 2/2 = 2/4$ — same amount, different form

WORKED EXAMPLES — STUDY THESE BEFORE YOU PRACTISE
EXAMPLE 1

$$\frac{2}{3} \text{ — } \frac{3}{5}$$

1. Common denominator 15: $\frac{10}{15}$ vs $\frac{9}{15}$

EXAMPLE 2

$$\frac{1}{3} \text{ — } \frac{2}{3}$$

2. Compare the numerators.
3. Answer: $<$.

Answer: $<$

EXAMPLE 3

Order fractions

Grade 4 · Skill M7 · Lesson — read before Sheet 21

M7
Lesson

GOAL: Student orders fractions from least to greatest.

BIG IDEA

A fraction shows part of a whole. The top number (numerator) is the part; the bottom (denominator) is the total.

KEY IDEAS
Anatomy of a Fraction
numerator / denominator

The NUMERATOR (top) tells you how many parts you have. The DENOMINATOR (bottom) tells you how many equal parts the whole is split into.

Tip: $3/8 = 3$ parts out of 8 equal parts
Bigger Denominator = Smaller Piece

$$\frac{1}{2} > \frac{1}{4} > \frac{1}{8} > \frac{1}{16}$$

When the numerator is the same, a bigger denominator means smaller pieces — more cuts = smaller slices.

Tip: Would you rather $1/2$ or $1/8$ of a pizza?
Equivalent Fractions

$$\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8}$$

Multiply or divide BOTH top and bottom by the same number to get an equivalent fraction.

Tip: $1/2 \times 2/2 = 2/4$ — same amount, different form
WORKED EXAMPLES — STUDY THESE BEFORE YOU PRACTISE
EXAMPLE 1

$$\frac{1}{2}, \frac{1}{4}, \frac{2}{3}$$

1. Common denominator 12

Answer: $\frac{1}{4} < \frac{1}{2} < \frac{2}{3}$

EXAMPLE 2

$$\frac{1}{4}, \frac{2}{4}, \frac{3}{4}$$

1. Common denominator 4.
2. Compare the numerators, smallest first.
3. Answer: $\frac{1}{4} < \frac{2}{4} < \frac{3}{4}$.

Answer: $\frac{1}{4} < \frac{2}{4} < \frac{3}{4}$

EXAMPLE 3

$$\frac{1}{3}, \frac{2}{3}, \frac{5}{6}$$

1. Common denominator 6.
2. Compare the numerators, smallest first.
3. Answer: $\frac{1}{3} < \frac{2}{3} < \frac{5}{6}$.

Answer: $\frac{1}{3} < \frac{2}{3} < \frac{5}{6}$

EXAMPLE 4

$$\frac{1}{3}, \frac{2}{3}, \frac{3}{4}$$

1. Common denominator 12.
2. Compare the numerators, smallest first.
3. Answer: $\frac{1}{3} < \frac{2}{3} < \frac{3}{4}$.

Answer: $\frac{1}{3} < \frac{2}{3} < \frac{3}{4}$

numerator / denominator

The NUMERATOR (top) tells you how many parts you have. The DENOMINATOR (bottom) tells you how many equal parts the whole is split into.

Tip: $3/8 = 3$ parts out of 8 equal parts

Bigger Denominator = Smaller Piece

$$\frac{1}{2} > \frac{1}{4} > \frac{1}{8} > \frac{1}{16}$$

When the numerator is the same, a bigger denominator means smaller pieces — more cuts = smaller slices.

Tip: Would you rather $1/2$ or $1/8$ of a pizza?

Equivalent Fractions

$$\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8}$$

Multiply or divide BOTH top and bottom by the same number to get an equivalent fraction.

Tip: $1/2 \times 2/2 = 2/4$ — same amount, different form

Multiply fractions

Grade 5-6 · Skill M7 · Lesson — read before Sheet 45

M7
Lesson

GOAL: Student multiplies fractions.

BIG IDEA

A fraction shows part of a whole. The top number (numerator) is the part; the bottom (denominator) is the total.

KEY IDEAS
Anatomy of a Fraction
numerator / denominator

The NUMERATOR (top) tells you how many parts you have. The DENOMINATOR (bottom) tells you how many equal parts the whole is split into.

Tip: $3/8 = 3$ parts out of 8 equal parts

Bigger Denominator = Smaller Piece

$$\frac{1}{2} > \frac{1}{4} > \frac{1}{8} > \frac{1}{16}$$

When the numerator is the same, a bigger denominator means smaller pieces — more cuts = smaller slices.

Tip: Would you rather $1/2$ or $1/8$ of a pizza?

Equivalent Fractions

$$\frac{1}{2} = \frac{2}{4} = \frac{3}{6} = \frac{4}{8}$$

Multiply or divide BOTH top and bottom by the same number to get an equivalent fraction.

Tip: $1/2 \times 2/2 = 2/4$ — same amount, different form

WORKED EXAMPLES — STUDY THESE BEFORE YOU PRACTISE
EXAMPLE 1

$$\frac{2}{3} \times \frac{3}{4}$$

1. $2 \times 3 = 6$, $3 \times 4 = 12$, simplify
